

# OPEN SOURCE SECURITY DOCS

## What does “Open Source Security Docs” stands for?

The non-profit “Open Source Security Docs Project” stands out as a medium-term project whose foundations were laid in the last quarter of 2023 by a 21-year-old young man. The main objective of this project, built on the logic of the Linux kernel, is the following:

- Establishing a large community.
- Translating documents into various languages in the areas of cybersecurity and software written by individuals.
- Adopting correct use of LinkedIn and email.
- Designing open source CTF applications.
- Providing live Bug Bounty training.

## How does “Open Source Security Docs” work?

Since the “Open Source Security Docs Project” has been built on the Linux kernel, `#root`, `%sudo`, GID definitions are used within the scope of the project. The 4-person `#root` team will be determined by the fully authorized `#root`. `%sudo` teams will be determined by the 4-person `#root` team.

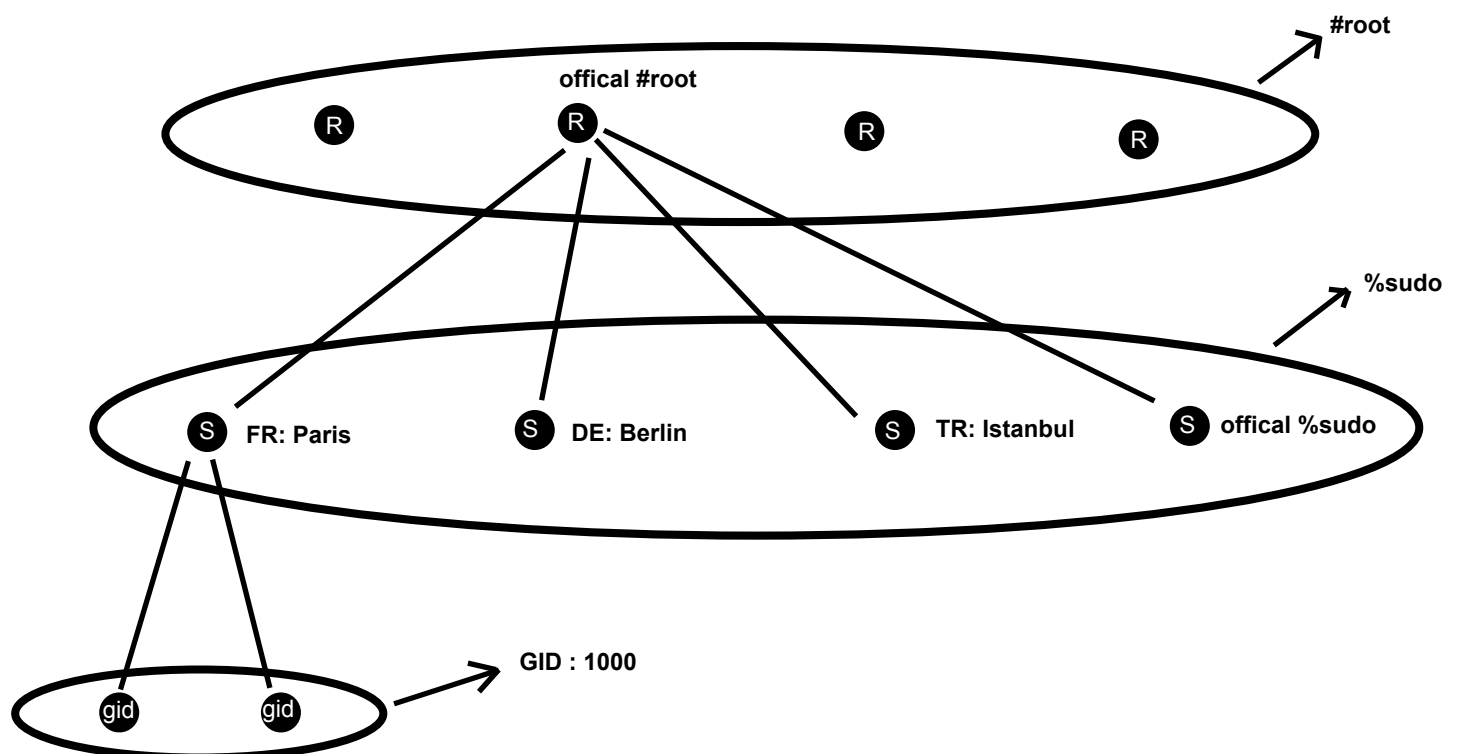

Assigned duties of the `#root` team and `%sudo` teams determined by the fully authorized `#root`,  
**#root**

- They will carry out studies for the first quarter of 2025.
- The `#root` member determined by the `#root` team should repeat the source code of the OSSdocs page edited by the `%sudo` team member through the panel.

### **%sudo**

- `%sudo` member in country X will need to translate the document written by any person in country X into English and share it with `%sudo` members located in other countries.
- If `%sudo` members do not academically translate the document into English, they can create a GID translator group within their own organization within the framework of the rules determined by the `#root` team. OSSdocs `#root` team will be flexible in this regard.
- `%sudo` members should translate the documents they receive in English into the official language of the country in which they live and deliver this document to the authorized `%sudo` member.
- A `%sudo` member selected by the `#root` team should edit documents received by other `%sudo` members and reproduce the source code of the OSSdocs web page.

## Open Source Security Docs tree structure

## **Open Source Security Docs 2024-2025**

- The #root team is targeted to be formed in the second quarter of 2024.
- How will the working principle of the OSSdocs project be developed by the #root team in the second quarter of 2024? is intended to be
  - documents written by humans by the #root team in the second quarter of 2024, within this framework, it is aimed which rules should be within the framework of sudo teams.
- It is aimed for the #root team to start working on the %sudo teams in the third quarter of 2024.
- It is aimed to determine %sudo teams in the third quarter of 2024.
- It is aimed to determine the basic structure of the OSSdocs project by the #root team in the third quarter of 2024.
- it is aimed to start actively working on the OSSdocs project in the last quarter of 2024.

**NOTE:** It should be noted that the non-profit OSSdocs project is a medium-term project whose foundations are being laid by people who are devoted to the field of Cyber Security. It is obvious that many things will be subject to changes until the last quarter of 2024. While we are taking firm steps towards the determined goal, the only thing that will not be revised is the appearance of the [opensourcesecuritydocs.com](https://opensourcesecuritydocs.com) website. Within the scope of the OSSdocs project, no CSS or JavaScript will be interfered with the official page.

### **Questions asked about Open Source Security Docs:**

#### **Why is there a mole in OSSdocs' logo?**

- OSSdocs project has been built on Linux kernel logic. It was inspired by the sentence used by the person who publicly declared the idea during his first-time learning Linux. "I am able to realize a task that I aim to do in more than one way. "It's just like a molehill." There is a mole in the logo because of this sentence.

#### **How will the use of email and LinkedIn be adopted within the scope of the OSSdocs project?**

- Only LinkedIn and email addresses will be allowed to be declared in the contact section at the end of the document written by the person. In this case, the adoption of e-mail and LinkedIn use will be targeted.

#### **How will %sudo teams be determined within the OSSdocs project?**

- It will be decided by the #root team in the third quarter of 2024
